Student's Weekly Report of Internship

Student Name:	Vadadoriya Abhi Jaysukhbhai		
Enrollment Number:	220670131051		
Week Duration:	16/02/2026 – 20/02/2026		
Name Of Organization:	Innocreek solution		
External Guide Name:	Virul Vegad		
External Guide Contact details:	**Email:** contact@innocreek solution.tech	**Mob No:**	91578 93772
Internal Faculty Guide Name:	Prof. Birendrasinh Zala.		

Work done in last Week with description (Attach supporting Documents Like Diagram, Screen Shot of each Work):

1. Learn and build to making deadline page in backend with createname, duedate, createdBy etc.
2. Learn and build to making notification and project page with type, message and deadline
3. Learn and build to making supervisor request page in backend with status, message, and supervisor.

Plans for next week:

1. Implement deadline page in frontend.
2. Implement notification, project and supervisor in frontend.
3. make a student controller page.

Total Working Hrs: 40

Signature of Student:

The above entries are correct, and the grading of work done by Trainee is

Excellent	Very Good	Good	Fair	Below Average	Poor
✓					

Signature of External Guide with Company Seal:

Signature of Internal Guide:

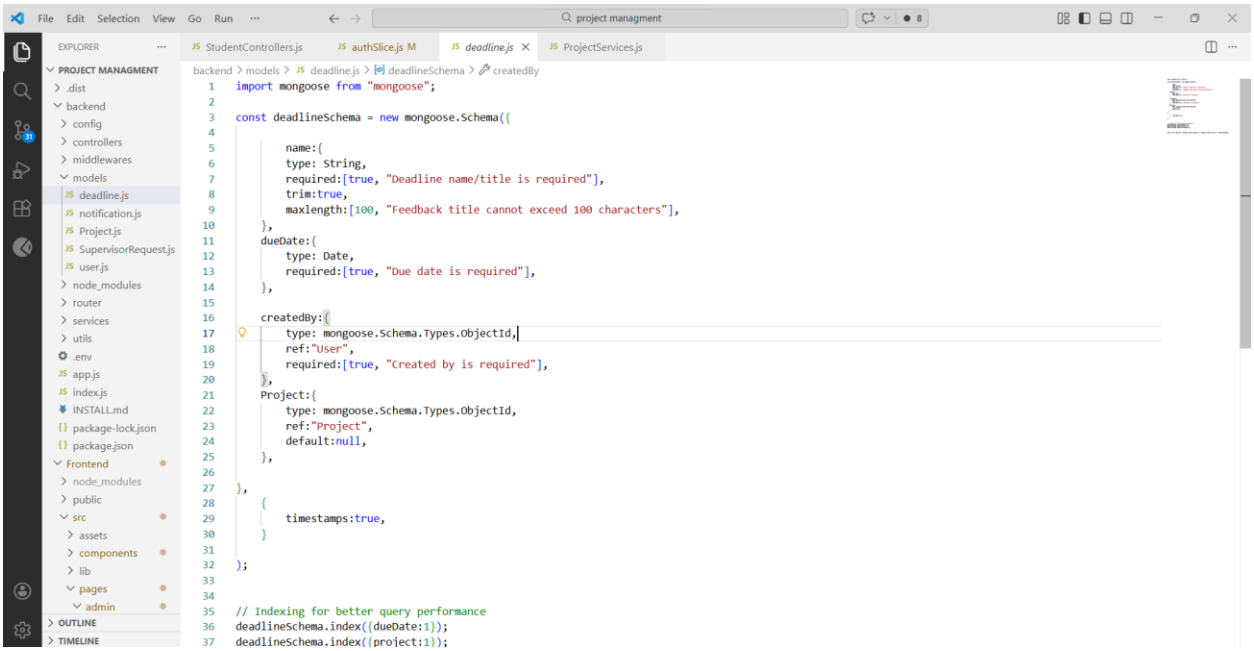
Weekly Report of Internship

Uni-Track Project Management:

During the Eight week, I make deadline, notification, project, and supervisor-request model in backend.

Concepts Learned:

Learn to make deadline page, notification model and supervisor request model with title, status, description etc.



- Deadline model inside we create name, dueDate, createdBy and project name etc.

```jsx
import mongoose from "mongoose";

const notificationSchema = new mongoose.Schema({
    user:{
        type: mongoose.Schema.Types.ObjectId,
        ref:"User",
        required:[true, "User ID is required"],
    },
        message:{
        type: String,
        required:[true, "Message is required"],
        trim:true,
        maxlength:[1000, "Notification message cannot exceed 1000 characters"],
    },
    isRead:{
        type: Boolean,
        default:false,
    },
    link:{
        type: String,
        default: null,
    },
    type:{
        type: String,
        enum:["request", "approval", "rejection", "feedback", "deadline", "general","meeting","system"],
        default:"general",
    },
    priority:{
        type: String,
        enum:["low", "medium", "high"],
        default:"low",
    },

},
    {
        timestamps:true,
    }
```

- In this notification page create link, type, message, user, isread and priority etc.

```jsx
import mongoose from "mongoose";

const supervisorRequestSchema = new mongoose.Schema({

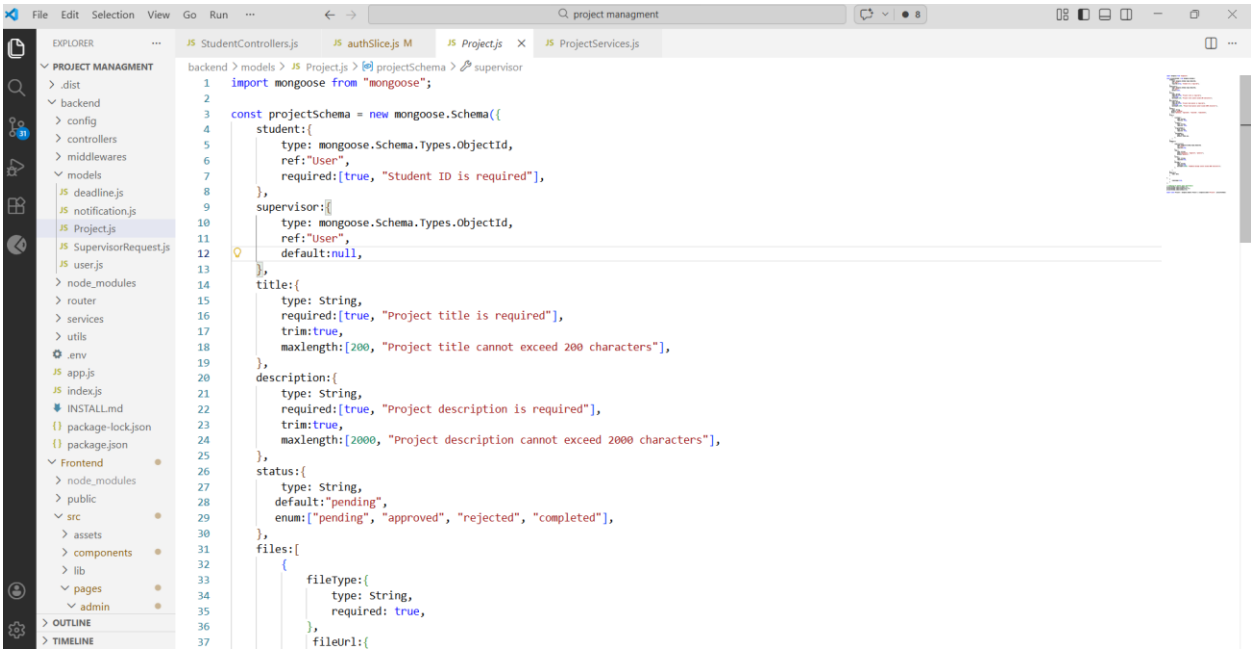
        student:{
        type: mongoose.Schema.Types.ObjectId,
        ref:"User",
        required:[true, "Student ID is required"],
    },
    supervisor:{
        type: mongoose.Schema.Types.ObjectId,
        ref:"User",
        required:[true, "Supervisor ID is required"],
    },
    message:{
        type: String,
        required:[true, "Message is required"],
        trim:true,
        maxlength:[250, "Message cannot exceed 250 characters"],
    },
    status:{
        type: String,
        default: "pending",
        enum:["pending", "accepted", "rejected"],
    },

},
    {
        timestamps:true,
    }

);

// Indexing for better query performance
supervisorRequestSchema.index({student:1});
supervisorRequestSchema.index({supervisor:1});
```

- In this supervisor-request model make student, supervisor, message, status with time stamp etc.



- In this project model make student, supervisor, title, description, status and files etc.

Conclusion:

This way we learn to make project, deadline, notification, and supervisor request model in backend.
